(C0.1) Give a general description and introduction to your organization.

Avery Dennison helps make brands more inspiring and the world more intelligent as a global leader in pressure-sensitive technology and materials and retail branding and information solutions. Our businesses include the production of pressure-sensitive materials and a variety of tickets, tags, labels and other converted products. Some pressure-sensitive materials are sold to label printers and converters that convert the materials into labels and other products through embossing, printing, stamping and die-cutting. Some materials are sold by us in converted form as tapes and reflective sheeting. We also manufacture and sell a variety of other converted products and items not involving pressure-sensitive components, such as fasteners, tickets, tags, radio-frequency identification ("RFID") inlays and tags, and imprinting equipment and related services, which we market to retailers, apparel manufacturers, and brand owners. Our reportable segments for fiscal year 2017 were (i) Label and Graphic Materials ("LGM"); (ii) Retail Branding and Information Solutions ("RBIS"); and (iii) Industrial and Healthcare Materials ("IHM"). In 2017, the LGM, RBIS, and IHM segments made up approximately 68%, 23% and 9%, respectively, of our total sales. In 2017, international operations constituted a substantial majority of our business, representing approximately 76% of our sales. As of December 30, 2017, we operated approximately 180 manufacturing and distribution facilities worldwide with approximately 30,000 employees and had operations in over 50 countries, with sales from continuing operations of $6.6 billion.

<th>Responsibility</th>
<th>Frequency of reporting to the board on climate-related issues</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chief Executive Officer (CEO)</td>
<td>Both assessing and managing climate-related risks and opportunities</td>
<td>Annually</td>
</tr>
</tbody>
</table>

C1.2a

(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored.

Avery Dennison collects data from our web-based sustainability tracking tool monthly, consolidated and passed to both operational and executive-level management. The Corporate Leadership Team, whose sustainability-related responsibilities include reviewing and assessing climate change risks and opportunities, meets several times a year. We report results to the Corporate Leadership Team and with the Board of Directors. In addition, Avery Dennison has a communication plan for engagement with internal and external stakeholders regarding energy and climate change actions and progress. Avery Dennison communicates with investors, shareholders and employees through our Annual Report, our Corporate Sustainability Report, the CDP, and our corporate website.

C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?
Yes
C1.3a Provide further details on the incentives provided for the management of climate-related issues.

Who is entitled to benefit from these incentives?
Business unit manager

Types of incentives
Monetary reward

Activity incentivized
Emissions reduction target

Comment
Each business unit has strategic plans that include a number of key initiatives of which greenhouse gas reduction is one. Overall performance of business units and business unit managers is measured against these key targets.

Who is entitled to benefit from these incentives?
Energy manager

Types of incentives
Monetary reward

Activity incentivized
Energy reduction project

Comment
Environmental/Sustainability managers have overall accountability for ensuring public reduction targets are met.

Who is entitled to benefit from these incentives?
Environment/Sustainability manager

Types of incentives
Monetary reward

(C2.2b) Provide further details on your organization's process(es) for identifying and assessing climate-related risks.

i) At a company level, the Sustainability Steering Committee identifies, reviews, and, if necessary, acts on climate change related risks and opportunities brought by business unit experts in sustainability and environmental, health, and safety. Climate-change related efforts are guided by our Sustainability Charter – this has three core principles related to People, Planet and Prosperity.

ii) At the asset level, Avery Dennison has introduced a number of processes that are designed to assess climate change-related performance, and through this, risks and opportunities. These are on-going and include: a. Maintaining a web-based sustainability data collection tool. This tool, which is currently being used to collect, among other things, data relating to our energy usage/carbon footprint, is an ongoing mechanism used for decision-making purposes. b. At the product and customer level, Avery Dennison assesses risks/opportunities through detailed customer research and life cycle analysis of its products. These assessments then support expansion of our sustainable product offerings as appropriate to ensure that the company takes advantage of evolving opportunities. For example, Avery Dennison has developed an LCA-based environmental assessment tool for sustainable product development known as “Avery Dennison Greenprint” which helps customers understand the relative environmental impacts of the products that they buy. We use the Avery Dennison Greenprint tool in our two major business units: Pressure Sensitive Materials and Retail Branding and Information Solutions.

Avery Dennison prioritizes climate change risks and opportunities based on impact to our business, the immediacy and likelihood of occurrence. We conduct a material assessment on a biennial basis to ensure that it reflects the sustainability issues most important to our stakeholders and businesses. To identify the issues, we reviewed a variety of sources, including internal strategic plans and reports, customer surveys, media coverage, and Internet postings. We also interviewed more than 35 internal subject matter experts who interact frequently with our various stakeholders. By proactively addressing our material issues, we believe we will create products and programs that fuel our ongoing business success.

(C2.2c) Which of the following risk types are considered in your organization's climate-related risk assessments?

<td>Low</td>
</tr>
<tr>
<td>Potential financial impact</td>
<td>3000000</td>
</tr>
<tr>
<td>Explanation of financial impact</td>
<td>Although direct energy costs are not a significant portion of the Company’s operating costs, if we are unable to reduce energy consumption, energy costs could rise. A 5 percent increase in electric and natural gas costs resulting from taxes or regulations could result in more than $3 million per year in additional costs.</td>
</tr>
<tr>
<td>Management method</td>
<td>Avery Dennison goes beyond complying with current environmental regulations. We actively track energy use across our operations and have reduced energy consumption by implementing numerous efficiency measures—we organized large-scale kaizen initiatives designed to remove or reduce energy and material-intensity of manufacturing processes at our twenty most energy-intensive facilities. For example, we reduced heat curing requirements in our heat printing processes at RBIS facilities by using more efficient inks and operating printing presses at standard, more efficient settings. Similarly, at PSM coating facilities, we have optimized the temperatures and throughput of our drying ovens. These measures are being expanded to other facilities and enable us to mitigate the potential risk of cost increases.</td>
</tr>
<tr>
<td>Cost of management</td>
<td>0</td>
</tr>
<tr>
<td>Comment</td>
<td>Included in the cost of doing business, so we estimate these cost to be $0. The cost of these actions is typically combined with broad sustainability and business initiatives including carbon, energy, and other environmental concerns.</td>
</tr>
</tbody>

Identifier
Risk 2

Where in the value chain does the risk driver occur?
Direct operations

Risk type
Transition risk

Primary climate-related risk driver
Market: Changing customer behavior

Type of financial impact driver
Technology: Reduced demand for products and services

Company-specific description
Increased customer attention on environmental performance of products, including the carbon footprint, could affect their selection of Avery Dennison’s products.

Time horizon
Medium-term

Likelihood
Likely

Magnitude of impact
Medium-low

Potential financial impact
66000000

Explanation of financial impact
We are already responding to changing consumer behavior driven by a demand for more sustainable products. The financial implications of the risk would be determined by the market shift. With sales of approximately $6.6 billion in 2017, a 1% shift would represent a loss of $661 million in sales.

Management method
To manage these risks we are expanding our sustainable product offerings through detailed customer research and life cycle analysis of our products. Our analyses have helped us focus our product innovation on reducing the environmental impact of the materials found in our products by: 1. Designing thinner and lighter labeling and trim materials 2. Developing bio-based adhesives formulations that reduce consumption of fossil-based materials 3. Designing products that facilitate recycling We utilize our environmental assessment tool, known as “Avery Dennison Greenprint” to help leading U.S. and European customers estimate the relative energy savings and GHG emissions reductions of the products they buy. The Avery Dennison Greenprint tool has been used in our two major business units: Label and Packaging Materials and Retail Branding and Information Solutions. For example, we help brands and retailers communicate their product sustainability to the consumers.

Cost of management
200000

Comment
We are investing $200,000 annually in developing and marketing products that help reduce environmental impact. Conducting Life Cycle Assessments of our products cost approximately $30,000 per product.

Identifier
Risk 3

Where in the value chain does the risk driver occur?
Direct operations

Comment
(C2.4) Have you identified any climate-related opportunities with the potential to have a substantive financial or strategic impact on your business?
Yes

C2.4a

(C2.4a) Provide details of opportunities identified with the potential to have a substantive financial or strategic impact on your business.

Identifier
Opp1

Where in the value chain does the opportunity occur?
Direct operations

Opportunity type
Resilience

Primary climate-related opportunity driver
Resource substitutes/diversification

Type of financial impact driver
Other, please specify (Reduced operational costs)

Company- specific description
Avery Dennison could efficiently meet reporting obligations due to our multiple year experience with carbon and energy management tracking and reporting on a voluntary basis. This experience can create a cost advantage relative to less prepared competitors.

Time horizon
Short-term

Likelihood
Very unlikely

Magnitude of impact
Medium-low

Potential financial impact
20000

Explanation of financial impact
Specific costs associated with emissions reporting obligations will vary based on the type of program, scope, and implementation (approximately $20,000); Avery Dennison has several years of experience measuring and voluntarily reporting emissions data, and may be more prepared for reporting requirements than competitors, resulting in a potential cost advantage. We have become increasingly more efficient at preparing our corporate GHG inventory.

Strategy to realize opportunity
Included in the cost of doing business, so we estimate these cost to be $0. The cost of these actions are combined with other sustainability and business initiatives and strategies. We estimate we invested approximately $100,000 to update our sustainability database.

Cost to realize opportunity
100000

Comment

Identifier
Opp2

Where in the value chain does the opportunity occur?
Direct operations

Opportunity type
Resilience

Primary climate-related opportunity driver
Participation in renewable energy programs and adoption of energy-efficiency measures

Type of financial impact driver
Other, please specify (Reduced capital costs)

Company- specific description
Within regions of China where Avery Dennison operates, stricter environmental regulations are being proposed that would have significant economic impacts on our facilities. The regulations are targeting a reduction in volatile organic compounds (VOCs) from industrial operations. Avery Dennison is well-positioned to meet and exceed these proposed targets, providing us an opportunity in the market. Due to our global policies and procedures, AD China plants are below the limits of the regulations that have come into effect in the relevant provinces, and therefore gives a competitive advantage over competitors who had higher VOC emissions.

Time horizon
Short-term

Likelihood
Very likely

Magnitude of impact
Medium

Potential financial impact
100000

Explanation of financial impact
Based on the cost of environmental compliance at other Chinese facilities, it is expected that avoided fees could exceed $100,000 annually.
Strategy to realize opportunity
To maintain compliance with additional regulation, establishing relative standards and monitoring systems will be required. Additionally, promotion of sustainability efforts and concepts by the Chinese government can effectively demonstrate the need for compliance.

Cost to realize opportunity
0

Comment
Avery Dennison is in the process of reducing VOCs from select products through its Research and Development efforts. This is already a part of our R&D budget and would not require additional costs to realize this opportunity.

Where in the value chain does the opportunity occur?
Direct operations

Opportunity type
Products and services

Primary climate-related opportunity driver
Shift in consumer preferences

Type of financial impact driver
Increased revenue through demand for lower emissions products and services

Company-specific description
Customers increasingly judge products based on their environmental performance. Avery Dennison has the opportunity to increase sales by developing products that have relatively lower carbon footprint than our competitors.

Time horizon
Short-term

Likelihood
Likely

Magnitude of impact
Medium

Potential financial impact
6000000

Explanation of financial impact
We are responding to changing consumer behavior driven by a demand for more sustainable products, such as our ThinStream products that combine an ultra-thin PET liner material with patented machine technology to yield 17% more labels per roll. The financial implications of the opportunity would be determined by the market shift. With sales of approximately $6.1 billion, a 1% shift would represent $61 million in sales.

Strategy to realize opportunity
To manage these opportunities we are expanding our sustainable product offerings through detailed customer research and life cycle analysis of our products. Our analysis have helped us focus our product innovation on reducing the environmental impact of the materials found in our products by: 1. Designing thinner and lighter labeling and trim materials 2. Developing bio-based adhesives formulations that reduce consumption of fossil-based materials 3. Designing products that facilitate recycling. We utilize our environmental assessment tool known as “Avery Dennison Greenprint” to help leading U.S. and European customers estimate the relative energy savings and GHG emissions reductions of the products they buy. The Avery Dennison Greenprint tool has been used in our two major business units: Label and Packaging Materials and Retail Branding and Information Solutions. For example, we help brands and retailers communicate their product sustainability to the consumers.

Cost to realize opportunity
200000

Comment
The costs associated with these actions include investing $200,000 annually in developing and marketing products that help reduce environmental impact. Conducting Life Cycle Assessments of our products cost approximately $30,000 per product.

(C-AC3.1b/C-CE3.1b/C-CH3.1b/C-CO3.1b/C-EU3.1b/C-FB3.1b/C-MM3.1b/C-OG3.1b/C-PF3.1b/C-ST3.1b/C-TO3.1b/C-TS3.1b) Indicate whether your organization has developed a low-carbon transition plan to support the long-term business strategy.
Yes

C3.1c
(C3.1c) Explain how climate-related issues are integrated into your business objectives and strategy.

Avery Dennison’s business strategy focuses on top line growth in all markets, operational excellence and attracting and retaining talent. We recognize that climate change is an important global issue with potential implications to our business. Our Energy and Climate Change Strategy corresponds with our business and sustainability strategies, and includes an established science-based target to reduce absolute greenhouse gas emissions by at least 26% (3% per year) by 2025, compared to a 2015 baseline. Our Sustainability Charter lays out the primary tenants of how we influence our business strategy to integrate sustainability and climate change through the following goals: More sustainable products - Avery Dennison will improve the energy and carbon footprint of our products and services through innovation and life cycle management. For example, our Greenprint tool houses our environmental product information, which we use for internal decision making and discussion with customers. More sustainable processes - Avery Dennison will improve the energy and GHG efficiency of our operations and will work toward continual improvement at all facilities. We collect data from our web-based sustainability tracking tool monthly, consolidated and passed to both operational and executive-level management. The Corporate Governance and Social Responsibility Committee, whose responsibilities include reviewing and assessing climate change risks and opportunities meets twice a year and the business unit sustainability steering committees meet four to six times a year.

We report results to the Corporate Leadership Team and with the Board of Directors.- More sustainable purpose: Avery Dennison will communicate and engage with key stakeholders to achieve our energy and climate change goals and to meet the interests of customers, shareholders, employees, and the communities where we operate. Avery Dennison has a communication plan for engagement with internal and external stakeholders regarding energy and climate change actions and progress. Avery Dennison communicates with investors, shareholders, and employees through our Annual Report, our Corporate Sustainability Report, the CDP, and our corporate website. We have embedded sustainability into our strategic planning, innovation and operations processes, and are rigorously measuring performance in this area.

The aspects of climate change that have influenced Avery Dennison’s strategy include regulatory, physical and consumer-related risks and incentives-based opportunities. The most substantial business decisions made include expanding use of life cycle assessment in product design, along with partnering and membership in NGO organizations with a focus on GHG reduction. These activities were influenced by stakeholder requests, brand differentiation, desire for a leadership position in sustainability, and reducing energy costs.

The key components of our short term strategy that have been influenced by climate change include activities that support our Energy and Climate Change Strategy and enable us to work towards our emission reduction targets, such as energy evaluations and management projects at prioritized sites including:- Energy reclamation and efficiency projects- Building/infrastructure efficiency- Supply-side procurement and peak-load analysis- Alternative energy, as feasible- Teaming with energy experts on energy reductions opportunities, analyses. In addition, as part of Avery Dennison’s waste reduction initiatives, the company has started to divert from landfill a growing proportion of its industrial waste by sending this waste off-site to municipal waste-to-energy facilities. By supporting energy recovery from waste, Avery Dennison is helping to reduce GHG emissions elsewhere, downstream of our operations, by avoiding landfill methane emissions from waste that would have been landfilled. Avery Dennison is expanding its lifecycle program for product design and development and we set internal goals related to product lifecycle in 2013. Our innovation teams use screening lifecycle assessment to evaluate new products with the goal that 80% of new products will have reduced impacts when compared to existing products.

The most important components of the long term strategy that have been influenced by climate change include a change in core business focus and development and incorporation of new technologies. We have set new long term goals for 2025 based on current science, and which will incorporate more renewable energy into our utility mix.

These activities gain Avery Dennison strategic advantage through cost reductions and by enabling product innovation which will enhance sales and help to reach new markets and customers.

C3.1d

(C3.1d) Provide details of your organization’s use of climate-related scenario analysis.

<table>

</thead>
<tbody>
<tr>
<td>Other, please specify (World Wildlife Fund's Climate Savers)</td>
<td>Our approach is based on The 3% Solution developed by World Wildlife Fund, CDP and McKinsey &amp; Company. Because our facilities require different solutions based on their design and location, we’re pursuing reductions through a variety of means, such as improving energy efficiency, sourcing renewable power and procuring renewable energy certificates. We anticipate our science-based target to be approved by SBTi by the end of 2018.</td>
</tr>
</tbody>
</table>

C-AC3.1e/C-CE3.1e/C-CH3.1e/C-CO3.1e/C-EU3.1e/C-FB3.1e/C-MM3.1e/C-OG3.1e/C-PF3.1e/C-ST3.1e/C-TO3.1e/C-TS3.1e
As a member of World Wildlife Fund's Climate Savers and the Renewable Energy Buyers Alliance, and as a signatory of the American Businesses Act on Climate Pledge, we support the global effort to reduce greenhouse gas emissions (GHGs) and keep global temperatures to less than two degrees Celsius above pre-industrial levels. We believe that every sector of society, including business, must do its part to help reach these targets.

We're working specifically to reduce the carbon emissions from powering our more than 180 facilities. Almost all of the energy we use comes from electricity or natural gas. Our aim is to lower absolute emissions by at least 3 percent each year between 2015 and 2025—a minimum of 26 percent in total. Our approach is based on The 3% Solution developed by World Wildlife Fund, CDP and McKinsey & Company. Because our facilities require different solutions based on their design and location, we're pursuing reductions through a variety of means, such as improving energy efficiency, sourcing renewable power and procuring renewable energy certificates. In late 2016, we entered into our first renewable energy power purchase agreement (PPA) in the United States. We expect the renewable energy certificates we receive via the PPA to offset 50 percent of the GHG emissions generated from our electricity consumption in the U.S.

C4. Targets and performance

C4.1

(C4.1) Did you have an emissions target that was active in the reporting year?

Absolute target

C4.1a

(C4.1a) Provide details of your absolute emissions target(s) and progress made against those targets.

<table>
<thead>
<tr>
<th>Target reference number</th>
<th>Abs 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scope</td>
<td>Scope 1 +2 (market-based)</td>

<tr>
<td>Target year</td>
<td>2025</td>
</tr>
</tbody>
</table>

Is this a science-based target?
Yes, we consider this a science-based target, but this target has not been approved as science-based by the Science-Based Targets initiative

% achieved (emissions)
77%

Target status
Underway

Please explain
Our goal is to achieve at least a 3% absolute reduction year over year. By basing our approach on The 3% Solution developed by World Wildlife Fund, CDP and McKinsey & Company, we'll cut emissions by a minimum of 26 percent over the next decade. We anticipate our science-based target to be approved by the SBTi by the end of 2018.

C4.2

(C4.2) Provide details of other key climate-related targets not already reported in question C4.1a/b.

C4.3
(C4.3) Did you have emissions reduction initiatives that were active within the reporting year? Note that this can include those in the planning and/or implementation phases.

Yes

C4.3a

(C4.3a) Identify the total number of projects at each stage of development, and for those in the implementation stages, the estimated CO2e savings.

<table>

**C4.5**

(C4.5) Do you classify any of your existing goods and/or services as low-carbon products or do they enable a third party to avoid GHG emissions?
Yes

---

**C4.5a**

(C4.5a) Provide details of your products and/or services that you classify as low-carbon products or that enable a third party to avoid GHG emissions.

**Level of aggregation**
Group of products

**Description of product/Group of products**
In developing labeling and graphic materials with a smaller carbon footprint, Avery Dennison enables its customers to reduce the carbon footprint of their products. Avery Dennison has conducted a growing number of life cycle assessments (LCA) to identify opportunities to reduce the energy and carbon footprint of our major product lines. Findings to date have shown that the principal opportunities for reducing the environmental impact of our pressure-sensitive labeling and graphics materials lie in the selection of raw materials and the end-of-life disposal of those materials. In contrast, we estimate the manufacturing phase of our products’ life cycle contributes to less than 10% of the overall impact on the major environmental indicators. These findings have helped us focus our product innovation on reducing the environmental impact of the materials found in our products by: 1. Designing thinner, lighter labeling and trim materials 2. Developing bio-based adhesives formulations that reduce consumption of fossil-based materials 3. Designing products that facilitate recycling For example, Avery Dennison ThrinStream products combine an ultra-thin PET liner material with patented machine technology to yield 17% more labels per roll. With more labels per roll, customers can operate more efficiently by reducing the frequency of roll change-overs and decrease associated GHG emissions with transporting fewer rolls of materials. We utilize our environmental assessment tool, known as "Avery Dennison Greenprint" to help leading U.S. and European customers estimate the relative energy savings and GHG emissions reductions of the products they buy. Showing a customer the reduction in their environmental footprint will hopefully influence the customer’s choice of product. Avery Dennison also provides materials (“inlays” and tags) for use in radio frequency identification (RFID) applications. RFID technology can enable large-scale retail organizations and consumer product companies to track products more efficiently throughout the supply chain. Tracking products more efficiently enables optimization of product shipping and transportation, potentially reducing transportation-related GHG emissions. Access to more sophisticated supply chain data can also assist companies in calculating their products’ carbon footprint and capturing other supply chain efficiencies.

**Are these low-carbon product(s) or do they enable avoided emissions?**
Low-carbon product

**Taxonomy, project or methodology used to classify product(s) as low-carbon or to calculate avoided emissions**
Other, please specify (Cradle to Avery Gate LCA; ReCipe assmnt)

**% revenue from low carbon product(s) in the reporting year**

**Comment**
These figures were estimated using the results of a Cradle to Avery Gate Life Cycle Assessment study that applied the ReCipe impact assessment method (2008) to calculate climate change. ReCipe uses the GWP's published in the Intergovernmental Panel on Climate Change (IPCC) Fourth Assessment Report (2007).
C5. Emissions methodology

Explanation

Business travel

Evaluation status
Relevant, calculated

Metric tonnes CO2e

11518

Emissions calculation methodology
All business travel was calculated by Radius Travel. Air travel was calculated from reports where each flight segment was categorized into specific flight haul lengths and then multiplied by DEFRA's published emission factors for those flights. Rental car was calculated based on reports from twelve (12) rental car vendors, which included total miles driven. Total fuel usage was then calculated by average mpg for that vehicle type. This data was then multiplied by the specific emission factor for that vehicle type using emission factors for gasoline and diesel passenger cars, and full size vehicles. For hotel stays, total room nights was multiplied by 25.2 kg CO2/room-night, where this emission factor was estimated in the hotel and casino market sector.

Percentage of emissions calculated using data obtained from suppliers or value chain partners

C9. Additional metrics

C9.1
(C9.1) Provide any additional climate-related metrics relevant to your business.

<table>
<thead>
<tr>
<th>Description</th>
<th>Waste</th>
</tr>
</thead>
<tbody>
<tr>
<td>Metric value</td>
<td>95 percent landfill-free</td>
</tr>
</tbody>
</table>

Please explain:

2025 Goal: To be 95 percent landfill-free, with at least 75 percent of waste reused, repurposed, or recycled. We work continuously to minimize the solid waste created through our manufacturing operations. Our main waste products are excess paper, laminate, liner, fabric, adhesive and other materials left over from making our products. We’re pursuing a vision of sending zero operational waste to landfills. Our 2025 goal is to be 95 percent landfill-free and to reuse, recycle or repurpose at least 75 percent of our waste. (We’ve also committed to eliminating customer waste created by our products by 70 percent.) As of the end of 2016, 91 percent of our solid waste was being diverted from landfills, and 59 of our sites worldwide were operating landfill-free. About 58 percent of all diverted waste was recycled. We’re building new partnerships with recyclers to help increase that number. At the same time, we’re working to better understand how to reduce and more efficiently use the materials that come into our facilities.

C-CH9.3a

(C-CH9.3a) Provide details on your organization's chemical products.

<table>

<td>No third-party verification or assurance</td>
</tr>
</tbody>
</table>

C10.2

(C10.2) Do you verify any climate-related information reported in your CDP disclosure other than the emissions figures reported in C6.1, C6.3, and C6.5?

No, we do not verify any other climate-related information reported in our CDP disclosure.

C11. Carbon pricing

C11.1

(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?

No, and we do not anticipate being regulated in the next three years.

C11.2

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?

Yes.

C11.2a
(C11.2a) Provide details of the project-based carbon credits originated or purchased by your organization in the reporting period.

- **Credit origination or credit purchase**
  - Credit purchase

- **Project type**
  - Solar

- **Project identification**
  - Verified to which standard
    - Please select
  - Number of credits (metric tonnes CO2e)
  - Number of credits (metric tonnes CO2e): Risk adjusted volume
  - Credits cancelled
    - Please select
  - Purpose, e.g. compliance
    - Voluntary Offsetting

---

C11.3

(C11.3) Does your organization use an internal price on carbon?

No, but we anticipate doing so in the next two years

---

C12. Engagement

---

C12.1

(C12.1) Do you engage with your value chain on climate-related issues?

Yes, our suppliers

---

C12.1a

(C12.1a) Provide details of your climate-related supplier engagement strategy.

- **Type of engagement**
  - Information collection (understanding supplier behavior)

- **Details of engagement**
  - Collect climate change and carbon information at least annually from suppliers

- **% of suppliers by number**
  - 80

- **% total procurement spend (direct and indirect)**
  - 80

- **% Scope 3 emissions as reported in C6.5**

- **Rationale for the coverage of your engagement**
  - These values correspond to our finished goods suppliers. We make use of the supplier data in our supplier scorecards and in our responsible sourcing policy.

---

C12.3

(C12.3) Do you engage in activities that could either directly or indirectly influence public policy on climate-related issues through any of the following?

- Trade associations

---

C12.3b

(C12.3b) Are you on the board of any trade associations or do you provide funding beyond membership?

Yes
C12.3c

Enter the details of those trade associations that are likely to take a position on climate change legislation.

**Trade association**
National Association of PET Container Resources

**Is your position on climate change consistent with theirs?**
Consistent

**Please explain the trade association’s position**
The association promotes increased recycled content of PET plastic that offsets extraction of virgin material.

**How have you, or are you attempting to, influence the position?**
We are working with the association to promote the position by creating products that enable food-grade PET recycling so that recycled PET can easily offset virgin PET material.

**Trade association**
Sustainable Apparel Coalition

**Is your position on climate change consistent with theirs?**
Consistent

**Please explain the trade association’s position**
Avery is in alignment with SAC goals as outlined in the SAC’s Higg Facilities Module that includes, among other things, energy management systems and GHG reduction.

**How have you, or are you attempting to, influence the position?**
Avery participated on a number of working groups in the SAC and holds a co-chair position on the adoption working group. Through this involvement, we are working to influence the position of the SAC and as an extension, its members.

**Trade association**
Tag and Label Manufacturers Association Label Initiative for the Environment

**Is your position on climate change consistent with theirs?**
Consistent

**Please explain the trade association’s position**
The associations Label Initiative for the Environment (LIFE) Measurement is required to set goals that lead to change.

**How have you, or are you attempting to, influence the position?**
All of our manufacturing operations are LIFE certified.

**Trade association**
Association of Postconsumer Plastic Recyclers Design for Recyclability

**Is your position on climate change consistent with theirs?**
Consistent

**Please explain the trade association’s position**
The Design for Recyclability promotes increased recycled content of all plastics and offsets extraction of virgin material.

**How have you, or are you attempting to, influence the position?**
We support this position by creating products that enable clean recycling of plastics (PET and HDPE) which can easily offset the extraction of new materials.

C12.3f

**What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?**

The processes that we have in place to ensure all of our direct and indirect activities that influence policy are consistent with our overall climate change strategy are two-fold:

1) We track new and proposed climate change legislation and our engagement with trade associations through Avery Dennison’s sustainability and legal affairs organizations.

2) We review these regulations and engagements quarterly with those at Avery Dennison responsible for Sustainability efforts and make recommendations to ensure alignment with our Climate Change strategy.

C12.4
Have you published information about your organization's response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).

**Publication**
In voluntary sustainability report

**Status**
Complete

**Attach the document**
AveryDennison_SustainabilityReport_2017_f.pdf

</tbody>
</table>

SC1.4

(SC1.4) Do you plan to develop your capabilities to allocate emissions to your customers in the future?
Yes

SC1.4a

(SC1.4a) Describe how you plan to develop your capabilities.

Avery Dennison is currently revising its emissions allocation methodology for customers, based on our sales value relative to their purchases. We anticipate implementing this allocation approach in the coming year. Additionally, we regularly update and implement a supplier scorecard for our upstream suppliers.
SC2.1

(SC2.1) Please propose any mutually beneficial climate-related projects you could collaborate on with specific CDP Supply Chain members.

SC2.2

(SC2.2) Have requests or initiatives by CDP Supply Chain members prompted your organization to take organizational-level emissions reduction initiatives?
    No

SC3.1

(SC3.1) Do you want to enroll in the 2018-2019 CDP Action Exchange initiative?
    No

SC3.2

(SC3.2) Is your company a participating supplier in CDP’s 2017-2018 Action Exchange initiative?
    No

SC4.1

(SC4.1) Are you providing product level data for your organization’s goods or services, if so, what functionality will you be using?
    No, I am not providing data

SC4.2d

(SC4.2d) Have any of the initiatives described in SC4.2c been driven by requesting CDP Supply Chain members?
    No

Submit your response

In which language are you submitting your response?
    English
